## Re~mov Silicone & Adhesive Remover

### Re-Mov Canada Introduces Re~mov™ a Revolutionary Silicone and Adhesive Remover

Re~mov™ removes silicone caulks, sealants, and adhesives more effectively and quickly than any other product on the market. Any tasks that would have been near impossible, or at best, time consuming, are now accomplished with ease. Re~mov™ instantly breaks the bond of cured silicone without elbow grease, dip tanks, mixing, heating or special tools. The most difficult tapes and films are removed without a struggle and cleanup is simplicity itself. This remarkable product is so efficient that it can actually save more money than it costs by reducing labor, lost materials, and machinery downtime. Also, items that typically need to be discarded can be reused. Among its varied uses, Re~mov™ removes silicone caulk, polyurethane caulks, fire barrier sealant, Liquid Nails®, contact adhesive, insulation foam, water-proofing materials, tape residue, double face tape, Blue Max® and other protective films. The product doesn't use flammable or corrosive chemicals and contains less than 1% Hazardous Air Pollutants (HAPs). It will not harm most surfaces and is safer than most solvents regarding skin contact. Re~mov™ is more effective than acetone and methyl ethyl keytone, both of which are extremely flammable, toxic and hazardous to the environment.

### Safe On the following Surfaces:

- Metals all types, Tools
- Glass, Reflective glass, Mirrors
- Wood: furniture, floors, cabinets
- Fiberglass / gel coat
- Plexiglas / polycarbonates, most plastics
- Most Carpets, clothing, fabrics, vinyl and upholstery
- Varnished, urethaned or painted surfaces
- Stone surfaces / cultured marble / Tiles
